

# RELOADERS' GUIDE

When You Are  
Looking For  
Consistency,  
Reliability &  
Performance...  
Look No Further  
Than Alliant Powder

Centerfold  
Powder Guide  
Pullout Inside

# Our Mission: PREMIUM PERFORMANCE, CONSISTENT QUALITY.

Every container of Alliant smokeless powder is backed by a century of manufacturing experience, and the most exacting quality control procedures in the industry. We check and control chemical composition, the shape and size of powder grains, even the propellants' density and porosity. We send samples of every batch to our ballistics lab, testing, among other things, for burning speed. Then, after blending batches together for exactly the right ballistic characteristics, we use our advanced computerized equipment to test again.

The result: a line of products known and respected for consistent quality and performance— not only in the lab, but especially on the firing line. One of the reasons you're a reloader, after all, is so you'll know exactly what to expect every time you pull the trigger. With Alliant powders you will. Not only shell after shell, but also year after year.

## CAUTION

Millions of men and women reload ammunition as a hobby, or because the cost savings allow them to enjoy shooting more often. You should always reload so that the safest and most accurate loads on the shooting line will be yours, and always remember that to become or to continue to be a safe reloader, **you must be careful at all times.** As a reloader, you are dealing with and manufacturing explosive materials; handling powders and primers that can, if misused, explode or burn, causing property damage, serious personal injury--even death! Later, when you shoot the ammunition you've produced and checked, you will be the person closest to the gun, the one most likely to be injured if improperly loaded ammunition causes your gun to malfunction.

**Protect yourself by studying books that describe safe reloading techniques in detail. When using smokeless powders, use only the exact type and quantity described herein. Always store and use your smokeless powders in accordance with the guidelines listed in this booklet.**

## POWDER WARNINGS

- **NEVER** substitute smokeless powder for black powder, or for black powder substitutes.
  - **NEVER** mix together any two powders, regardless of type, brand, style, or source.
  - **NEVER** use the data in this Reloaders' Guide for any other powders, even if advertised "similar to Bullseye" or "burns the same as Red Dot," etc.
- Violation of any of the above could result in severe personal injury (including death) or gun damage.**

## WARNING — BE SURE TO:

- **The powder charge weights listed in our data tables are maximum.** For rifle and pistol loads, the maximum powder charge should be reduced by 10% to establish a minimum or starting powder charge.
- All loads have been tested in our ballistics lab with SAAMI approved, un-vented test barrels. Keep in mind that such test equipment often yields higher velocities than are usually obtained with sporting arms.
- If ever you are unsure of your load data, or if you detect any signs of high pressure while using load data from this Guide, stop loading or testing at once. Contact our technical service personnel at 800-276-9337 before proceeding.

## BALLISTICS

The ballistic data shown in this booklet were obtained in the laboratory under strictly controlled conditions. **You must load only the exact combinations that are listed.** Even then, different reloading techniques, plus industrial tolerances of each component, likely will cause your ammunition, or ammunition loaded by other competent laboratories, to yield slightly different ballistic data. Therefore, **powder charge recommendations in this booklet must never be exceeded.**

Safe shooters and hunters know that accuracy, not maximum power, is their key to success.

## FOR TECHNICAL ASSISTANCE

For Technical Assistance or for any information not included in this Reloaders' Guide, please call 1-800-276-9337.

# ALLIANT SHOTSHELL POWDER ALL-TIME FAVORITES RED DOT, GREEN DOT, AND

**Red Dot®.** NOW CLEANER BURNING! America's #1 choice for clay target loads, now 50% cleaner. Since 1932, more 100 straights than any other powder. Available in 8-lb., 4-lb., and 1-lb. canisters.

**e3®.** The first of a new generation of high performance powders.

**Green Dot®.** NOW CLEANER BURNING! It delivers precise burn rates for uniformly tight patterns, and you'll appreciate the lower felt recoil. Versatile for target and field. Available in 8-lb., 4-lb., and 1-lb. canisters.

**PROMO.** America's #1 economy-priced 12 ga. target powder. Promo has the same burn speed as Red Dot, but is more dense, thus requiring a smaller bushing to obtain the same charge weight. Available in 8-lb. canister only.

**Blue Dot®.** The powder of choice for magnum lead shotshell loads. 10, 12, 16, and 20 gauge. Consistent and accurate. Doubles as magnum handgun powder. Available in 5-lb., and 1-lb. canisters.

# ALL POWDERS ARE #1! HOT, AND UNIQUE ARE 50% CLEANER BURNING.

**American Select®.** Our "ultra clean" burning premium powder makes a versatile target load and superior 1-oz. load for improved clay target scores. Great for Cowboy Action handgun loading too! **Available in 8-lb., 4-lb., and 1-lb. canisters.**

**410®.** Cleanest .410 bore powder on the market.

**Steel®.** Designed for waterfowl shotshell. Gives steel shot high velocity within safe pressure limits for 10 and 12 gauge loads. **Available in 4-lb. and 1-lb. canisters.**

**Herco®.** Since 1920, a proven powder for heavy shotshell loads, including 10, 12, 16, 20 and 28 gauge target loads. The ultimate in 12 gauge, 1-1/4 oz. upland game loads. **Available in 8-lb., 4-lb., and 1-lb. canisters.**

**Unique®.** Now CLEANER BURNING! Most versatile shotgun/handgun powder made. Great for 12, 16, 20 and 28 gauge loads. Use with most hulls, primers and wads. **Available in 8-lb., 4-lb., and 1-lb. canisters.**

# 410™ RELOADING DATA **NEW!**

Alliant Powder's new 410 is the only flake powder that is specifically designed for the exacting needs of .410 skeet and field loads. It's the cleanest burning .410 powder available. New 410 is more efficient, with lower powder charge weights, giving it optimum loading characteristics. The superior ballistic performance of 410 creates perfect patterns. Consistent performance in any weather, shot after shot, lot after lot, makes the new 410 your reloading powder of choice.

## BIG THINGS COME IN SMALL PACKAGES

### 410™ Powder

Alliant's 410™ is the cleanest burning .410 bore powder available. Its outstanding performance gives .410 reloaders the opportunity to design their own dependable load, tailored to their individual needs.

# PROMO™ RELOADING DATA

**PROMO™ is Alliant's budget priced 12 gauge target shotshell powder. Available in 8 pound containers only, it provides economical loads that are reliable and consistent, shot after shot.**

**Note - To determine the proper bushing size for PROMO™ shotshell powder, be sure to use the following procedure:**

- Select a bushing 2 sizes smaller than the one recommended for the same number of grains of Red Dot® from the manufacturers' bushing chart, then...
- Place this bushing in your reloading machine and weigh several charges on your powder scales, then...
- Compare the weighed charge to the recommended charge weight.
- Adjust the bushing size if necessary to obtain the desired charge weight.
- Confirm your bushing size with each new powder lot.
- We recommend this same procedure for confirming the correct bushing size for each new lot of PROMO™.
- With all powders, you should routinely verify your powder charge using an accurate powder scale.

## All data are for 12 gauge, 2 3/4 inch shells

# e<sup>3</sup> RELOADING DATA **NEW!**

Great patterns, superior consistency, low charge weight efficiency. To top it off, e<sup>3</sup> is the cleanest double-base powder available, and far less affected by temperature changes than single-base powders. That means better performance from your reloads and more broken targets. Give it a shot and you'll see the difference. Energy, Efficiency, Excellence...that's e<sup>3</sup>.

**...All the way to 100.** Improved pattern consistency, better gas expansion rates, higher muzzle velocities – the statistics speak for themselves: new competition-grade e<sup>3</sup> isn't your everyday powder. In fact, it's the cleanest burning double-base powder available, and far less affected by hot or cold weather than single-base powders. That means better gun performance and more clays broken. Give it a shot and you'll see the difference. For more information and a retailer near you, go to [www.alliantpowder.com](http://www.alliantpowder.com). **e<sup>3</sup>. energy, efficiency, excellence.**

**TO GET  
THERE,  
START  
HERE.**

If you're serious about breaking targets, start with Alliant powder. It's value priced and performs consistently, batch after batch. Reload with Alliant, you can't lose.

# NON-TOXIC SHOTSHELL RELOADING DATA

**WARNING:** Reloading steel shotshells requires strict adherence to Alliant published reloading specifications. The reloading specifications provided in this publication were derived through the use of controlled laboratory conditions. While reloading steel shotshells, the reloader must adhere precisely to all the components, without exception, set forth in the load data and specifications. Alliant recommends that both powder charge and shot charge be individually weighed to insure compliance to the load data. Steel shotshells should only be used in well maintained firearms that are designed to shoot steel shot loads. Alliant recommends that commercially available shotshell sealant be applied to both the primer and crimp areas to prevent moisture penetration.

Regarding the use of fillers/spacers:

Spacer or filler wads serve the purpose of raising the shot column to a level that will allow for the forming of a good crimp. If a filler is required for a particular load, the thickness and location of that filler will be indicated in the "spacer" column. As an example, it might be described in the following manner: 1/8 U, 1/8 O, which means that two 1/8 inch thick spacers are required; one should be placed in the bottom of the wad cup directly under the shot, and a second one over the shot. Spacers can be stacked if necessary, and the number needed may vary depending on the size shot being used. If your crimp dishes in a bit, or bulges, you can add to or reduce the number of spacers to improve the crimp. Only slight adjustments, if any, will be necessary for this reason. We do not recommend the use of shot buffer in any of our loads.

# ALLIANT RIFLE & HANDGUN POWDERS: GREAT TASTE INCLUDING A NEW HEAVY MAGNUM

**Bullseye®.** America's best known pistol powder. Unsurpassed for .45 ACP target loads. Available in 8-lb., 4-lb., and 1-lb. canisters.

**Power Pistol®.** Designed for high performance in semi-automatic pistols and is the powder of choice for 9mm, .40 S&W and .357 SIG. Available in 4-lb. and 1-lb. canisters.

**Reloder 10X®.** Best choice for light bullet applications in .222 Rem, .223 Rem, .22-250 Rem and key bench rest calibers. Also great in light bullet .308 Win loads. Available in 5 lb. and 1 lb. containers.

**Reloder 15®.** The best all-around medium speed rifle powder. It provides excellent .223 and .308 cal. performance. Selected as the powder for U.S. Military's M118 Special Ball Long Range Sniper Round. Available in 5-lb. and 1-lb. canisters.

# BEST CHOICES FOR TARGET & HUNTING LOADS, MAGNUM POWDER FOR BIG GAME.

**2400®.** Legendary for its performance in .44 magnum and other magnum pistol loads. Originally developed for the .22 Hornet, it's also the shooter's choice for .410 bore. **Available in 8-lb., 4-lb., and 1-lb. canisters.**

**Unique®.** Now **CLEANER BURNING!** Most versatile shotgun/handgun powder made. Great for 12, 16, 20 and 28 gauge loads. Use with most hulls, primers and wads. **Available in 8-lb., 4-lb., and 1-lb. canisters.**

**Reloder 7®.** Designed for small caliber varmint loads, it meters consistently, and meets the needs of the most demanding bench rest shooter. Great in .45-70 and .450 Marlin. **Available in 5-lb. and 1-lb. canisters.**

**Reloder 19®.** Provides superb accuracy in most medium and heavy rifle loads and is the powder of choice for 30-06 and .338 calibers. **Available in 5-lb. and 1-lb. canisters.**

**Reloder 22®.** This top performing powder for big game loads provides excellent metering, and is the powder of choice for .270, 7mm magnum and .300 Win. magnum. **Available in 5-lb. and 1-lb. canisters.**

**Reloder 25®.** This new, advanced powder for big game hunting features improved slower burning, and delivers the high energy that heavy magnum loads need. **Available in 5-lb. and 1-lb. canisters.**

### NOTES and KEY pertain to Pistol and Revolver tables.

- Do not interchange cases of different manufacturers, nor bullets, nor primers.
- Be sure that each case is cradled and completely empty.
- Unless specifically recommended, use standard primers. Magnum primers are neither sized nor recommended for most calibers.
- Do not exceed the powder weight shown, and guard against accidental multiple charge of powder.
- Start with 10% less powder than shown. Work up gradually, watching for signs of high pressure.
- For some that every completed cartridge is not shorter than the length listed.
- Watch for signs of case head separation.

### KEY

- BR = Bench Rest
- EMC = Full Metal Case
- EMJ = Full Metal Jacket
- FN = Flat Nose
- FP = Flat Point
- FS = Full Size
- GC = Gas Check
- IB = Hollow Base
- IC = Hollow Cavity
- IP = Hollow Point
- IP = Hollow Point
- IP = Hollow Point
- J = J
- L = Lead
- M = Match
- ML = minimum overall length, measured from base to tip of bullet
- PP = Pointed Soft Point

### KEY

- BR = Bench Rest
- SB = Solid Base
- ST = Semi-Target
- SP = Spitzer Point
- Sp Pt = Spitzer Point
- WC = Wind Cutter
- WT = Weight
- BT = Bullet
- IN = Inches
- GR = Grain
- VE = Velocity
- psi = feet per second
- pow = powder charge
- wt = weight
- c.s.p. = casehead pressure, in copper units
- Mfr = manufacturer
- OAL = length, measured from base to tip of bullet

## HAVE YOU BEEN MISSING SOMETHING?

Reloder 15<sup>®</sup> is Alliant's premium, fast burning rifle powder, specially blended for the demands of varmint shooting. It combines 3,000+ fps velocity with the flat trajectory you need for excellent accuracy. Works great with varmint-weight .243 bullets, or heavier weight .223 and .22-250 bullets.

And Reloder 15 delivers consistency you can count on, shot after shot, year after year. Just as every other Alliant powder has for over a century. Try reloading with

Reloder 15. And start hitting what you've been missing.

Alliant Powder, P.O. Box 6, Radford, Virginia 24143-0006 Phone: 800-276-9337 Web site: [www.alliantpowder.com](http://www.alliantpowder.com)

# HANDLOADING PRECAUTIONS & TECHNICAL DATA

## Pistol and Revolver Cartridges Special Reloading Precautions

Most pistols and revolvers function best when loaded with a quick-burning powder such as Bullseye. Since peak pressure is reached very quickly, the SEATING DEPTH of the bullet is very important: the deeper the bullet, the higher the pressure. If the bullet is seated too deeply, dangerous pressures will be generated, which could burst the gun and cause severe personal injury (including death).

Equally critical is the powder charge. Guard AGAINST multiple charges when reloading. Certain cartridges (notably .38 Special) have been reloaded accidentally with double and even triple charges, with catastrophic results when fired in the gun.

### A. Prevent deeply seated bullets.

1. Your assembled cartridges must be as long as, or longer than, the minimum length listed for the combination you are reloading.
2. Set your bullet station accordingly and lock tool securely.
3. Keep bullet station clean of accumulating lead and grease.
4. Inspect all loaded rounds for overall length.
5. Be sure every bullet is held tightly by shell mouth, especially pistol loads (recoil drives magazine against bullet noses of contained cartridges).

### B. Prevent multiple charges.

1. **Handloading:** Keep track of every powder charge, then look inside all shells and compare powder levels.
2. **Progressive reloading:** Be sure every shell is truly empty; don't back up the turret; don't jiggle the handle; don't use a shell to clean out the powder train (use a paper cup or equivalent).

### C. Inspection.

1. Discard cases with split mouths.
2. Discard cases with enlarged primer pockets.
3. Do not use cases that are designed for primer-propelled practice cartridges; such cases may not be designed for full power loads.

## Physical Effect of Gun Recoil (Kick)

The rearward motion of every gun, its recoil, increases when heavier shot or heavier bullets are fired, and when higher velocity loads are fired. This motion must be opposed by the shoulder, or the pistol hand, of the shooter. Whenever the recoil is perceptibly annoying to the shooter, accuracy on succeeding firings undoubtedly diminishes.

When the shooting condition demands heavy loads and high velocity, recoil kick can be reduced by using a heavier gun, and by spreading the force over a larger area of the anatomy, such as by using a wider stock, larger grip, plus shoulder pad or softer grip.

Excellent publications available to the reloader, plus his or her own growing sophistication, have generated a wholesome trend away from maximum loads and toward accuracy of loads no more powerful than needed for the intended purpose. Reducing recoil increases accuracy.

Contributing to increased accuracy as well as the pleasantness of shooting is in two main areas:

1. This *Reloaders' Guide* includes many reduced loads.
2. Our research indicates that the burning rate of powders has a modest effect on recoil. For example, whenever two or more powders are listed for the same load, the slower one usually is chosen by the expert shooter as giving milder felt recoil. An intriguing aspect of reloading at home is the freedom to assemble, for example, trap loads with Red Dot or Green Dot powder, then to shoot them alternately to decide which seems more comfortable.

## Handloading Precautions

1. Understand what you are doing and why. Read handbooks and manuals on reloading. Talk to experienced reloaders. Write or call suppliers of components if you have questions or are in doubt.
2. Stay alert when reloading. Do not reload when distracted.
3. Establish a loading procedure and follow it. Do not vary your sequence of operations.
4. Examine empty cases (shotshell or metallic) to be sure they are in good condition before reloading. Never force live cartridges into or out of the chamber of a gun.
5. Do not use cases that are designed for primer-propelled practice cartridges; such cases may not be designed for full power loads.
6. Do not *ream* out or *enlarge* flash holes of metallic cartridge cases. This may change the ignition rate and result in dangerous pressures.
7. Do not punch out live primers. Fire the empty primed shells in a gun.
8. Do not mix primers. Primers differ in balance of ignition, which affects pressure and velocity. Use only the primer listed.
9. The shotshell loading data in the *Reloaders' Guide* are for LEAD SHOT only. Use steel shot only as specified in the steel shot data section (pgs. 6-7).
10. One-piece plastic wads for shotshells vary in compressibility and gas-sealing effectiveness. Use only the wad listed.
11. If you "throw," or measure powder charges by volume, check-weigh the charge frequently. Do not mix powders.
12. Do not use powders near a flame, spark-producing machinery, or heating device. Do not expose powders to temperatures above 100°F.
13. Keep out of reach of children.
14. Do not smoke while reloading.

# HANDLOADING PRECAUTIONS & TECHNICAL DATA (continued)

## Smokeless Powders for Reloading

We currently offer 15 powders for use in reloading. These are listed in the order of decreasing burning rates. Each powder listed is "slower" than those preceding it and "faster" than those following it. Among these Alliant smokeless powders, for example, Red Dot® burns more slowly than Bullseye®, but faster than Green Dot®.

Powder	Principal Use <sup>1</sup>	Can Also be Used In <sup>1</sup>
Bullseye®	Handgun Loads	12-Gauge Light Target Loads
Red Dot®	Light and Standard Shotgun Loads, 12-Gauge	Handgun Loads
American Select®	12-Gauge Target Loads	Handgun Loads
Green Dot®	Standard and Medium Shotgun Loads, 12- and 16-Gauge	Handgun Loads
Unique®	All-Around Shotgun Powder, 12-, 16-, 20-, and 28-Gauge	Handgun Loads
Power Pistol®	High performance pistol loads such as the 9mm, .40 S&W, and 10mm	Moderate pressure pistol cartridges like the .38 Special, .380 Auto, and .45 ACP
Hercos®	Heavy Shotgun Loads, 10-, 12-, 16-, 20-, and 28-Gauge	Heavy Handgun Loads
Blue Dot®	Magnum Shotgun Loads, 10-, 12-, 16-, 20-, and 28-Gauge	Magnum Handgun Loads
Steel®	Steel Shotgun, 10- and 12-Gauge	Magnum, Shotgun and Turkey Loads
2400®	Magnum Handgun Loads	Some Rifle and Shotgun Loads
Reloder® 7	Light Rifle Loads	Silhouette Loads
Reloder® 10X	Light Varmint/Light Bullet Loads	Bench rest caliber; Light Bullet 308
Reloder® 15	Medium Rifle Loads	Silhouette Loads
Reloder® 19	Magnum Rifle Loads	Target and hunting rifle loads
Reloder® 22	Magnum Rifle Loads	Maximum hunting loads
Reloder® 25	Magnum Rifle Loads	Maximum hunting loads

<sup>1</sup>Use only in the loads printed in this Guide.

## Packaging

Powder	1-lb Canister	4-lb Canister	5-lb Canister	8-lb Keg
Bullseye, Red Dot, American Select, Green Dot, Unique, Hercos, 2400	x	x		x
Power Pistol	x	x		
Blue Dot	x		x	
Reloder Series	x		x	
Steel	x	x		

All 15 powders are always in stock at distributors' magazines throughout the U.S.A., and in most countries where reloading is legally permitted and popular. Any reloader unable to purchase any of the 15 powders at retail stores that handle powders should write to the address on the back cover. We cannot ship directly, but we will endeavor to correct supply shortages in your area.

## Powder Information

Smokeless sporting propellants are of two basic types -- single-base and double-base. Single-base propellants derive their energy from nitrocellulose and double-base from a combination of nitrocellulose and nitroglycerin. Alliant propellants range from the "near" single-base American Select (2% nitroglycerin) to the high nitroglycerin (40%) double-base Bullseye. In addition, our propellants contain stabilizers for long storage life and various other ballistic modifiers which reduce flash, improve combustion efficiency, and promote clean burning.

Some of our propellants also have a chemical coating on the surface to control the burning rate. This creates a progressive burn for achieving higher velocities at lower pressures. All of our propellants have a graphite glaze, which ensures smooth, consistent metering of charges through volumetric reloaders.

Alliant propellants are extruded and cut into circular flakes or cylinders by precision dies and cutting equipment. Granule size tolerances are very tight and uniform to prevent separation of different size granules and to ensure consistent ballistic performance, load after load.

By utilizing a precise combination of chemical formulation, granule size, and chemical coatings, we are able to tailor the burning characteristics of our propellants to achieve the best overall performance in a wide range of loads.

Because each of our propellants is specifically engineered to have different burn rates and performance characteristics, **NEVER BLEND OR MIX DIFFERENT POWDERS, AND USE ONLY THE GRADE AND QUANTITY RECOMMENDED IN THIS RELOADER'S GUIDE.**

All powders burn with great precision and rapidly inside the gun chamber, generating the hot, high-pressure gas that accelerates the bullet (or shot) and drives it toward the target. It is critically important for safety that the powder used is matched to the bullet (or shot) weight and other factors; otherwise, the gun parts may be deformed or may even burst and cause serious personal injury (including death). Shot-to-shot accuracy can also be degraded by deviations from recommended loads. Even after 80 years of producing and testing powders, ballisticians are unable to calculate and predict exact ballistic results; we must test-fire our powders with each set of components and record the results. Therefore, the ballistic values and recommended combinations listed in this booklet must be followed without deviation.

Working up charges. For shotgun loads, use the charge weight shown. However, for all rifle and pistol loads, first load and fire a few cartridges at 10% less charge than is shown, watching for any sign of excessive pressure (difficult extraction, flattened or blown primers, unusual recoil).

Handgun loads. Many pistol and revolver loads require only small amounts of fast-burning powder; therefore: (1) guard against accidental double charges, and even multiple charges, whether loading with handtools or with progressive loading devices; (2) be sure that each bullet is positioned in the case so that the minimum overall length is not violated.

### Dram Equivalent

Prior to the commercialization of smokeless powder, shotgun shells were loaded with black powder. The weight measurement system used for black powder was "drams." Compared with black powder, smokeless powder is more dense and MUCH more energetic, so it cannot safely be measured and used like black powder. Indeed, a different weight system was selected for smokeless powder: "grains," wherein 7,000 grains equal one pound.

Since many shooters still wanted to be able to compare their smokeless powder loads with the original black powder loads, the term "dram equivalent" evolved. Simply stated, the dram equivalent is an indicator of the velocity of a particular shot load. But note that the charge and weight of smokeless powder must not be calculated from the dram equivalent.

### Notice

We have inserted information on the properties and storage of smokeless powder for your understanding, so that you can avoid unnecessary risks when using it. This information, on pages 51 and 52, was published initially by the Sporting Arms and Ammunition Manufacturers' Institute, Inc., several years ago in the interest of safety. You must read these pages carefully and comply with the precautions listed. If you have questions, please call or write to us at the address on the back cover.

## Important Safety and Health Precautions

To perform in a gun, powders must ignite easily and burn rapidly. These characteristics require use of common sense to avoid accidents. **YOU MUST OBSERVE THESE PRECAUTIONS:**

1. **DO NOT** smoke when reloading.
2. **DO NOT** use spark-producing tools.
3. **DO NOT** mix powders of different kinds.
4. **DO NOT** leave powder where children can get it.
5. **DO NOT** try to load when distracted.
6. Avoid an open fire or working near spark-producing machinery.
7. Pour out only the amount of powder needed for immediate work.
8. Check the powder measure each time it is used. Make sure the settings have not been accidentally changed. Check-weigh "thrown charges" frequently.
9. Clean up any spilled powders. Use a brush and dustpan; do not use a vacuum cleaner. Dispose of spilled powder as described in the SAAMI pages of this Guide.
10. Store powder only in its original container, which was carefully designed for this usage. **DO NOT REPACKAGE.** Do not purchase or accept any Alliant powder not in its original, **FACTORY-SEALED** container.
11. Be sure the powder container is completely empty before discarding. Do not use the container to store other powders or materials, or for any other purpose.
12. Always keep in mind that smokeless powder is an explosive material and highly flammable. It should always be stored and handled in such a way as to avoid impact, friction, heat, sparks, or flame.
13. Wear safety glasses when reloading.
14. This material contains nitroglycerin. Inhalation, skin contact, or ingestion may cause severe headache, nausea, and lowering of blood pressure. **THEREFORE, THE FOLLOWING PRECAUTIONS MUST BE OBSERVED WHEN HANDLING POWDERS:**
  - A. Do not take internally. In case of ingestion, cause vomiting. Call a physician.
  - B. Avoid contamination of food, beverages, or smoking materials.
  - C. Avoid breathing dust. Ensure adequate ventilation during handling.
  - D. Wash thoroughly after handling and before eating, drinking, or smoking.
  - E. Do not carry powder in clothing.

You must also always remember:

1. Establish a routine for reloading. It will result in more uniform loads and less chance of error.
2. Some primers are more powerful than others (they produce more gas at a higher temperature). Use only the primers specified herein.
3. Shotshell wads differ in their sealing ability. Use only the load combinations specified herein.
4. If you use cast bullets, their diameter, hardness, lubrication, and crimp will affect the ballistics.
5. The shotshell loads in this booklet are for use with **LEAD SHOT ONLY!** For steel shot see special steel section, pages 30-31.
6. Use only the brands of powder and components shown in our tables. Do not substitute other types.
7. Discharging firearms in poorly ventilated areas, cleaning firearms, or handling ammunition may result in exposure to lead, a substance known to cause birth defects, reproductive harm, and other serious physical injury. Have adequate ventilation at all times. Wash hands and face thoroughly after handling and before coming in contact with food, chewing materials, and smoking material.

## Reference Tables

Approximate Number of Pellets in Specific Weights of Lead Shot (Sizes 2 Through 9)

Weight, oz	No. 2	No. 4	No. 5	No. 6	No. 7	No. 8	No. 9

### Typical Percentage of Pellets in a 30-Inch Circle at 40 Yards (Pattern) for Various Choke Sizes

(Choke is a Constriction at the Muzzle of a Shotgun Barrel)

Full Choke—79%

Improved Cylinder—50%

Improved Modified Choke—65 to 70%

True Cylinder—40%

Modified Choke—55%

## Ballistic Data

The velocity and pressure obtained with the specific combinations of shell, wad, primer, bullet or shot weight, powder, and powder weight provided in this booklet were obtained in a laboratory, where considerable effort is made to control the load and test conditions. Velocity was measured with a chronograph (electric stopwatch). Pressure was measured either by compressing copper cylinders (C.U.P.), or electronically, by use of a piezoelectric transducer (P.S.I.).

Guns are designed to take a considerable amount of internal pressure, but if this is exceeded, they burst violently. Be alert to signs of excess pressure, such as heavy recoil, flattened primers, or blown primers. Don't make changes in the suggested loads.

Some variations (shaded areas) used in the reloading tables are for ease of reading and do not represent preferred loads.

The quantity of powder to use is listed in GRAINS, which are a measure of weight, under each powder column.

Every reloader needs a good-quality scale for weighing each powder charge, or for checking the weight of powder thrown by volumetric loaders.

### Special Notes Regarding Components Other Than Powder

**A. Shotgun Shells.** Manufacturers may sell ammunition under different brand names that are identical for reloading purposes. Following are popular variations. When in doubt, consult the ammunition producer.

- Federal Hi Power Plastic same as Duck and Pheasant, Field, Game, and Dove and Squirrel or Top Gun.
- Federal Premium (Integral Base Wad)
- Remington-Peters. Same as Mohawk brand shells.
- Remington-STS Type. Same as Premier, Nitro 27, GunClub, and Game Loads
- Winchester AA-Type. Old and new style hulls are interchangeable.
- Winchester Polyformed Type (Reifenhauser Tube) same as Duck and Pheasant, Dove and Squirrel.

#### B. Primers

- CCI 109 and CCI 209 are ballistically identical and can be interchanged.
- CCI 209M (Magnum) is "hotter" and cannot be substituted for CCI 109 or 209. Use 209M only as listed.
- Rem. 209 is "hotter" and cannot be substituted for Rem. 97★ or Rem. 209P primer.
- Rem. 209P is interchangeable with Rem. 97★ primer.
- Federal 209A is "hotter" and cannot be substituted for Federal 209.

**C. Wads.** Card wads and fiber wads are used for certain slug and buckshot loads and a few light shotshell loads. Do not interchange wads.

**D. Shot.** Use only clean lead shot. DO NOT USE STEEL SHOT IN SHOTSHELL LOADS EXCEPT AS LISTED IN STEEL™ SECTION.

**E. Shot Buffers.** Do not add any buffers or fillers of any kind to shotshell loads listed in this Guide.

**F. Cards and Fillers.** For revolver, pistol, and rifle cartridge reloading, do not add any cards, kapok, or fillers of any kind to loads listed in this Guide.

### Black Powder

Black powder is entirely different from smokeless powder. NEVER substitute one for the other. Smokeless powders have much more energy than black powder. NEVER attempt to use smokeless powder in black powder guns or saluting cannon; they may blow up and cause serious personal injury (including death).

## Powder Bushing Charts

A reloading scale is **required** to check the nominal weight of a powder charge.

Powder bushings can vary in the charge weight they drop and could vary as much as several grains under certain conditions.

Powder density, moisture content, and loading technique can cause a variation from the bushing weights listed on the charts. Also, the loading machine vibration affects charge weights. A complete loading cycle should be completed to **assure** an average powder charge weight.

The information in these tables has been supplied by the reloading machine manufacturers and **is not a reloading recommendation** or a result of Alliant's testing.

SPORTING ARMS AND AMMUNITION MANUFACTURERS' INSTITUTE, INC.  
Flintlock Ridge Office Center, 11 Mile Hill Road, Newtown, CT 06470-2359

## Properties and Storage of Smokeless Powder

Ammunition handloading has become increasingly popular in recent years. This information discusses properties of smokeless powder and offers recommendations for its storage.

This information is intended to increase the knowledge of all concerned individuals and groups regarding smokeless powder. The statements and recommendations made are not intended to supersede local, state, or Federal regulations. Proper authorities should be consulted on regulations for storage and use of smokeless powder in each specific community. A leaflet entitled "Sporting Ammunition Primers: Properties, Handling, & Storage for Hand Loading" supplements this information on smokeless powder.

### Properties of Smokeless Powder

Smokeless powders, or propellants, are essentially mixtures of chemicals designed to burn under controlled conditions at the proper rate to propel a projectile from a gun.

Smokeless powders are made in three forms:

1. Thin, circular flakes or wafers
2. Small cylinders
3. Small spheres

Single-base smokeless powders derive their main source of energy from nitrocellulose.

The energy released from double-base smokeless powders is derived from both nitrocellulose and nitroglycerin.

All smokeless powders are extremely flammable; by design, they are intended to burn rapidly and vigorously when ignited.

Oxygen from the air is not necessary for the combustion of smokeless powders since they contain sufficient built-in oxygen to burn completely, even in an enclosed space such as the chamber of a firearm.

In effect, ignition occurs when the powder granules are heated above their ignition temperature. This can occur by exposing powder to:

1. A flame such as a match or primer flash.
2. An electrical spark or the sparks from welding, grinding, etc.
3. Heat from an electric hot plate or a fire directed against or near a closed container even if the powder itself is not exposed to the flame.

When smokeless powder burns, a great deal of gas at high temperature is formed. If the powder is confined, this gas will create pressure in the surrounding structure. The rate of gas generation is such, however, that the pressure can be kept at a low level if sufficient space is available or if the gas can escape.

In this respect smokeless powder differs from blasting agents or high explosives such as dynamite or blasting gelatin, although smokeless powder may contain chemical ingredients common to some of these products.

High explosives such as dynamite are made to detonate, that is, to change from solid state to gaseous state with evolution of intense heat at such a rapid rate that shock waves are propagated through any medium in contact with them. Such shock waves exert pressure on anything they contact, and, as a matter of practical consideration, it is almost impossible to satisfactorily vent away from the effects of a detonation involving any appreciable quantity of dynamite.

Smokeless powder differs considerably in its burning characteristics from common "black powder."

Black powder burns essentially at the same rate out in the open (unconfined) as when in a gun.

When ignited in an unconfined state, smokeless powder burns inefficiently with an orange-colored flame. It produces a considerable amount of light brown noxious smelling smoke. It leaves a residue of ash and partially burned powder. The flame is hot enough to cause severe burns.

The opposite is true when it burns under pressure as in a cartridge fired in a gun. Then it produces very little smoke, a small glow, and leaves very little or no residue. The burning rate of smokeless powder increases with increased pressure.

If burning smokeless powder is confined, gas pressure will rise and eventually can cause the container to burst. Under such circumstances, the bursting of a strong container creates effects similar to an explosion.

For this reason, the Department of Transportation (formerly Interstate Commerce Commission) sets specifications for shipping containers for propellants and requires tests of loaded containers — under actual fire conditions — before approving them for use.

When smokeless powder in D.O.T. approved containers is ignited during such tests, container seams split open or lids pop off — to release gases and powder from confinement at low pressure.

### How to Check Smokeless Powder for Deterioration

Although modern smokeless powders are basically free from deterioration under proper storage conditions, safe practices require a recognition of the signs of deterioration and its possible effects.

Powder deterioration can be checked by opening the cap on the container and smelling the contents. Powder undergoing deterioration has an irritating acidic odor. (Don't confuse this with common solvent odors such as alcohol, ether and acetone.)

Check to make certain that powder is not exposed to extreme heat as this may cause deterioration. Such exposure produces an acidity which accelerates further reaction and has been known, because of the heat generated by the reaction, to cause spontaneous combustion.

Never salvage powder from old cartridges and do not attempt to blend salvaged powder with new powder. Don't accumulate old powder stocks.

The best way to dispose of deteriorated smokeless powder is to burn it out in the open at an isolated location in small shallow piles (not over 1" deep). The quantity burned in any one pile should never exceed one pound. Use an ignition train of slow burning combustible material so that the person may retreat to a safe distance before powder is ignited.

### Considerations for Storage of Smokeless Powder

Smokeless powder is intended to function by burning, so it must be protected against accidental exposure to flame, sparks or high temperatures.

For these reasons, it is desirable that storage enclosures be made of insulating materials to protect the powder from external heat sources.

Once smokeless powder begins to burn, it will normally continue to burn (and generate gas pressure) until it is consumed.

D.O.T. approved containers are constructed to open up at low internal pressures to avoid the effects normally produced by the rupture or bursting of a strong container.

Storage enclosures for smokeless powder should be constructed in a similar manner:

1. Of fire-resistant and heat-insulating materials to protect contents from external heat.
2. Sufficiently large to satisfactorily vent the gaseous products of combustion, which would result if the quantity of smokeless powder within the enclosure accidentally ignited.

If a small, tightly enclosed storage enclosure is loaded to capacity with containers of smokeless powder, the walls of the enclosure will expand or move outwards to release the gas pressure — if the powder in storage is accidentally ignited.

Under such conditions, the effects of the release of gas pressure are similar or identical to the effects produced by an explosion.

Hence only the smallest practical quantities of smokeless powder should be kept in storage, and then in strict compliance with all applicable regulations and recommendations of the National Fire Protection Association (reprinted at end of leaflet).

### Recommendations for Storage of Smokeless Powder

**STORE IN A COOL, DRY PLACE.** Be sure the storage area selected is free from any possible sources of excess heat and is isolated from open flame, furnaces, hot water heaters, etc. Do not store smokeless powder where it will be exposed to the sun's rays. Avoid storage in areas where mechanical or electrical equipment is in operation. Restrict from the storage areas heat or sparks which may result from improper, defective or overloaded electrical circuits.

**DO NOT STORE SMOKELESS POWDER IN THE SAME AREA WITH SOLVENTS, FLAMMABLE GASES, OR HIGHLY COMBUSTIBLE MATERIALS.**

**STORE ONLY IN DEPARTMENT OF TRANSPORTATION APPROVED CONTAINERS.**

Do not transfer the powder from an approved container into one which is not approved.

**DO NOT SMOKE IN AREAS WHERE POWDER IS STORED OR USED. PLACE APPROPRIATE "NO SMOKING" SIGNS IN THESE AREAS.**

**DO NOT SUBJECT THE STORAGE CABINETS TO CLOSE CONFINEMENT.**

**STORAGE CABINETS SHOULD BE CONSTRUCTED OF INSULATING MATERIALS AND WITH A WEAK WALL, SEAMS OR JOINTS TO PROVIDE AN EASY MEANS OF SELF-VENTING.**

**DO NOT KEEP OLD OR SALVAGED POWDERS.** Check old powders for deterioration regularly. Destroy deteriorated powders immediately.

**OBEY ALL REGULATIONS REGARDING QUANTITY AND METHODS OF STORING.** Do not store all your powders in one place. If you can, maintain separate storage locations. Many small containers are safer than one or more large containers.

**KEEP YOUR STORAGE AND USE AREA CLEAN.** Clean up spilled powder promptly. Make sure the surrounding area is free of trash or other readily combustible materials.

### 10-3 Smokeless Propellants.

**10-3.1** Quantities of smokeless propellants not exceeding 25 lb (11.3 kg) in shipping containers approved by the U.S. Department of Transportation, may be transported in a private vehicle.

**10-3.2** Quantities of smokeless propellants exceeding 25 lb (11.3 kg) but not exceeding 50 lb (22.7 kg), transported in a private vehicle, shall be transported in a portable magazine having wood walls of at least 1-in. (25.4-mm) nominal thickness.

**10-3.3** Transportation of more than 50 lb (22.7 kg) of smokeless propellants in a private vehicle is prohibited.

**10-3.4** Commercial shipments of smokeless propellants in quantities not exceeding 100 lb (45.4 kg) are classified for transportation purposes as flammable solids when packaged according to U.S. Department of Transportation Hazardous Materials Regulations (Title 49, Code of Federal Regulations, Part 173.197a), and shall be transported accordingly.

**10-3.5** Commercial shipments of smokeless propellants exceeding 100 lb (45.4 kg) or not packaged in accordance with the regulations cited in 10-3.4 shall be transported according to U.S. Department of Transportation regulations for Class B propellant explosives.

**10-3.6** Smokeless propellants shall be stored in shipping containers specified by U.S. Department of Transportation Hazardous Materials Regulations.

**10-3.7** Smokeless propellants intended for personal use in quantities not exceeding 20 lb (9.1 kg) may be stored in original containers in residences. Quantities exceeding 20 lb (9.1 kg), but not exceeding 50 lb (22.7 kg), may be stored in residences if kept in a wooden box or cabinet having walls of at least 1-in. (25.4-mm) nominal thickness.

**10-3.8** Not more than 20 lb (9.1 kg) of smokeless propellants, in containers of 1-lb (0.45-kg) maximum capacity, shall be displayed in commercial establishments.

**10-3.9** Commercial stocks of smokeless propellants shall be stored as follows:

- (a) Quantities exceeding 20 lb (9.1 kg), but not exceeding 100 lb (45.4 kg), shall be stored in portable wooden boxes having walls of at least 1-in. (25.4 mm) thickness.
- (b) Quantities exceeding 100 lb (45.4 kg), but not exceeding 800 lb (363 kg), shall be stored in nonportable storage cabinets having walls of at least 1-in. (25.4-mm) thickness. Not more than 400 lb (181 kg) may be stored in any one cabinet and cabinets shall be separated by a distance of at least 25 ft (7.63 m) or by a fire partition having a fire resistance of at least 1 hour.
- (c) Quantities exceeding 800 lb (363 kg), but not exceeding 5,000 lb (2268 kg), may be stored in a building if the following requirements are met:
  1. The warehouse or storage room shall not be accessible to unauthorized personnel.
  2. Smokeless propellant shall be stored in nonportable storage cabinets having wood walls at least 1 in. (25.4-mm) thick and having shelves with no more than 3 ft (0.92 m) separation between shelves.
  3. No more than 400 lb (181 kg) shall be stored in any one cabinet.
  4. Cabinets shall be located against walls of the storage room or warehouse with at least 40 ft (12.2 m) between cabinets.
  5. Separation between cabinets may be reduced to 20 ft. (6.1 m) if barricades twice the height of the cabinets are attached to the wall, midway between each cabinet. The barricades shall extend at least 10 ft (3 m) outward, shall be firmly attached to the wall, and shall be constructed of 1/4-in. (6.4-mm) boiler plate, 2-in. (51-mm) thick wood, brick, or concrete block.
  6. Smokeless propellant shall be separated from materials classified by the U.S. Department of Transportation as flammable liquids, flammable solids, and oxidizing materials by a distance of 25 ft (7.63 m) or by a fire partition having a fire resistance of at least 1 hour.
  7. The building shall be protected by an automatic sprinkler system installed according to NFPA 13, Standard for the Installation of Sprinkler Systems.
- (d) Smokeless propellants not stored according to (a), (b) and (c) above shall be stored in a Type 4 magazine constructed and located according to Chapter 6.

# AMMUNITION & RELATED PRODUCTS

**Full Service...** an unique concept which means you get all you need in one place.  
**ATK Ammunition & Related Products...** an unique collection of brands which gives you everything you need in one place.

Technically superior by design, every can of **Alliant Powder®** is backed by a century of manufacturing experience and the most exacting quality control procedures in the industry. Alliant produces top quality rifle, pistol and shotshell smokeless powders for the handloading enthusiast and competition shooter.

**Federal®** the only major manufacturer specializing in ammunition, produces Premium ammunition for a variety of uses: hunting, shooting sports, law enforcement and military. Federal also strongly supports conservation and national shooting organizations.

The leader in rimfire ammunition, **CCI®** is the choice of hunters and plinkers across the globe. It provides shooters with a wide variety of top performing rimfire products that include some of the fastest cartridges on the market. CCI also manufactures world famous primers for reloaders.

The leader in innovative bullet technology, **Speer®** concentrates its development efforts on providing the most advanced bullets for handloaders and factory ammunition. The company also loads outstanding handgun hunting and pistol cartridges that serve sportsmen and law enforcement agencies worldwide.

**RCBS®** produces high-quality reloading equipment and has for nearly 60 years. The company manufactures presses, dies, scales, bullet moulds and other reloading accessories to meet the most avid reloader's needs. It prides itself on outstanding customer service features the award winning Grand shotshell press—2002 NRA Shooting Illustrated Accessory of the Year.

**Outers®** is a leading manufacturer of gun-care chemicals solvents, and cleaning kits. Long a mainstay of gun cleaning tables everywhere, Outers is bringing innovative new products to gun cleaning and expanding its product line to include a variety of must-have cleaning products. It's how good, clean shots are made.

**Estate Cartridge®** manufactures high-quality shotgun ammunition at an affordable price. From target loads to buckshot and high velocity steel, Estate carries it all.

**Champion®** target company provides the avid trap, skeet or sporting clays shooter with a wide variety of clay targets, target throwers, and paper and mechanical targets. For the shooter looking to hone their skills, Champion target is a one-stop destination.

The first of its kind, the **Invisible Gun™** scent-removing cleaning kit is providing big game hunters with a final line of defense. It's the last step in camouflage for the trophy hunter who knows the importance of masking human scent.

**Shooters Ridge™** rock steady bi-pods, gun vises, rifle and pistol rests comprise a family of rugged, hard working and affordable shot-steadying products for the hunter on the move.

**Ram-Line®** stocks withstand the test of time, adding strength, accuracy and dependability to rifles and shotguns. For the seasoned hunter, beginning shooter or trained professional needing a highly visible law enforcement stock, Ram-Line® has the answer.

Innovative gun cleaning solutions are the specialty of **Gunslick®** brand cleaning products. Gunslick® has utilized advanced non-toxic chemistry to introduce a broad new lineup of innovative solutions that take the work out of gun care. Gunslick offers specific products for real gun cleaning needs.

**Weaver** provides rifle, pistol and shotgun scope users with a steady and strong way to securely fasten optics to a favorite firearm. Weaver rings set a standard by which mounting systems are still measured.
