### Police Cartridge

**Type 97 18.4mm Anti-personnel Ammunition**  
 It is the major lethal round used by Model 97 riot gun and has an effective range of 50m, each cartridge is loaded with 22 lead shots of 6mm in diameter and 1.2g. More than 50% of the shots will land on the target of regular size at 35m, shots will penetrate a 25mm panel of pine wood at 50m. Overall length: 65mm, weight: 43g.

**Type 97 18.4mm Rubber Ball Cartridges**  
 This is a non-lethal round to be used at a distance from 35m to 100m. Patterning of the projectile on a vertical target at 35m is smaller than 0.3x0.4m(EzxEy). Kinetic Energy at 35m is less than 120J. Kinetic Energy per section is less than 12J/cm<sup>2</sup>. Overall length: 65mm, weight: 18.7g, weight of projectile: 8.6g.

**Type 97 18.4mm Kinetic Energy Cartridges**  
 This non-lethal round is used for riot control at a distance from 35m to 100m, each cartridge contains 8 rubber balls of 8mm in diameter and 0.85g in weight. More than 50% of the balls will land on the target at 35m, kinetic energy of the ball at 35m is less than 28J. Overall length: 65mm, weight: 24g.

**Type 97 18.4mm Tear Gas Cartridges**  
 This shell produces tear gas of CS. The projectile can penetrate regular window glass panels at a distance up to 50m and effectively cover an area no less than 20m<sup>2</sup>. Ignition delay is set at 2s. Grouping of points of impact on a vertical target at 50m is smaller than 0.3x0.4m(EzxEy). Overall length: 65mm, weight: 21.7g.

**18.4mm Bean Bag Ammunition**  
 18.4mm Bean Bag Ammunition is one of the nonlethal anti-riot ammunition which is used to control the criminals by kinetic energy. It is mainly use to dispel close quarters crowd and control the criminals. Overall length: 65mm, weight: 45g, shooting precision in the distance of 15m: R<sub>50</sub> ≤ 15cm, R<sub>100</sub> ≤ 25cm.
