

DTS ACTION CONTROL SYSTEM

- Turning the adjustment screw clockwise results in the increase of tension on the forend lug resulting in a stiffer action, taking more effort to open and close the shotgun.
- Turning the adjustment screw counter clockwise results in the decrease of tension on the forend lug resulting in a looser action, making the gun easier to open.
- Each increment (hash mark/ audible click) results in .025mm of travel of the forend insert. The total amount of travel equals .6mm.
